# Ultradur<sup>®</sup> B 4300 G6 FC Aqua Polybutylene Terephthalate (PBT)

# **Product Description**

Ultradur B 4300 G6 FC Aqua is a easy flowing injection molding food and drinking water contact PBT with 30% glass fiber reinforcement for rigid, tough, and dimensionally stable parts.

PHYSICAL	ISO Test Method	Property Value
Density, g/cm <sup>3</sup>	1183	1.53
Viscosity Number, cm <sup>3</sup> /g	1628	102
Mold Shrinkage, parallel, %	294-4	0.34
Mold Shrinkage, normal, %	294-4	1.07
Moisture, %	62	
(50% RH)		0.2
(Saturation)		0.4
RHEOLOGICAL	ISO Test Method	Property Value
Melt Volume Rate (250 C/2.16 Kg), cc/10min.	1133	11
MECHANICAL	ISO Test Method	Property Value
Tensile Modulus, MPa	527	
23C		9,800
Tensile stress at break, MPa	527	
23C		140
Tensile strain at break, %	527	
23C		3.0
Flexural Strength, MPa	178	
23C		200
IMPACT	ISO Test Method	Property Value
Charpy Notched, kJ/m <sup>2</sup>	179	
23C		9.5
Charpy Unnotched, kJ/m <sup>2</sup>	179	
-30C		74
23C		70
THERMAL	ISO Test Method	Dromorty Volue
	130 Test Methou	Property Value

# **Processing Guidelines**

#### Material Handling Max. Water content: 0.04%

To ensure optimum part performance, this product must be dried prior to molding and maintained at a moisture level of less than 0.04%. Dehumidifying or desiccant dryers operating at 100-120C (212-248F) for 4 hours drying time are recommended. Further information concerning safe handling procedures can be obtained from the Safety Data Sheet. Alternatively, please contact your BASF representative.

## **Typical Profile**

Melt Temperature 250-270C (482-518F) Mold Temperature 60-100C (140-212F) Injection and Packing Pressure 35-125 bar (500-1500 psi)

#### **Mold Temperatures**

This product can be processed over mold temperatures of 60-100C (140-212F); however, for optimizing surface appearance, dimensional stability and part performance, mold surface temperatures of at least 80C (176F) are preferred.

#### Pressures

Injection pressure controls the filling of the part and should be applied for 90% of ram travel. Packing pressure affects the final part and can be used effectively in controlling sink marks and shrinkage. It should be applied and maintained until the gate area is completely frozen off.

Back pressure can be utilized to provide uniform melt consistency and reduce trapped air and gas. A maximum of 10 bar (145 psi) is recommended due to the risk of excessive shear.

#### **Fill Rate**

Fast fill rates are recommended to ensure uniform melt delivery to the cavity and prevent premature freezing. Surface appearance is directly affected by injection rate.

## Note

Although all statements and information in this publication are believed to be accurate and reliable, they are presented gratis and for guidance only, and risks and liability for results obtained by use of the products or application of the suggestions described are assumed by the user.
